WEAR VOLUME 168, NUMBERS 1–2, SEPTEMBER 1, 1993

Contents

Introductory Remark

Microtribology today and tomorrow 1
R. Kaneko (Tokyo, Japan)

Microscopic Force Measurements

Triboscopy: a new quantitative tool for microtribology. 7
M. Belin (Ecully, France)

Effects of humidity and tip radius on the adhesive force measured with atomic force microscopy. 13
Y. Sugawara, M. Ohta, T. Konishi, S. Morita (Hiroshima, Japan), M. Suzuki (Tokyo, Japan) and Y. Enomoto (Ibaraki, Japan)

Nanotribology studies of carbon surfaces by force microscopy. 17
C.M. Mate (San Jose, CA, USA)

Head–Disk Interface

The flow of thin lubricant films on rotating disks. 21
M.L. Forcada and C.M. Mate (San Jose, CA, USA)

Structure and friction of amorphous carbon films of nanometer thickness. 27
T. Yamamoto (Atsugi, Japan)

Gaseous wear products from perfluoropolyether lubricant films. 31
B.D. Strom, D.B. Bogy (Berkeley, CA, USA), R.G. Walmsley, J. Brandt (Palo Alto, CA, USA) and C. Singh Bhatia (San Jose, CA, USA)

Some head–disk interface tribology issues for near-contact recording on hard disk drives 37
D.B. Bogy, M. Donovan and E. Cha (Berkeley, CA, USA)

State of the art for nanospacing flying head slider mechanisms in magnetic recording disk storage. 43
N. Tagawa (Kanagawa, Japan)

Head–disk interaction in gas-lubricated slider bearings 49
M.H. Azarian, C.L. Bauer, T.M. O'Connor and M.S. Jhon (Pittsburgh, PA, USA)

Tribology of thin-film media in both flying and sliding modes. 59
M.H. Azarian, C.L. Bauer and M.S. Jhon (Pittsburgh, PA, USA)

Wear characteristics in thin-film media 77
T.M. O'Connor, M.S. Jhon, M.H. Azarian and C.L. Bauer (Pittsburgh, PA, USA)

Tribochemical reactions of very thin layers on magnetic recording disks. 85
S. Mori, N. Onodera (Morioka, Japan) and M. Itoh (Yokohama, Japan)

Surface and Interface Phenomena

Contact electrification phenomena and powder surface treatments. 91
T. Oguchi and M. Tamatani (Kawasaki, Japan)

Influence of atomic oxygen on space tribology in a low earth orbit 99
N. Ohmae (Osaka, Japan)

Effect of surface conformity on friction. 105
H.M. Stanley and D.B. Bogy (Berkeley, CA, USA)

Mechanism of nanoscale indentation 109
T. Yokohata and K. Kato (Sendai, Japan)

Particulate-contamination-free wafer-handling systems for gas, liquid and vacuum environments used in a 64 Mbyte dynamic random-access memory process 115
H. Tokisue and H. Inoue (Tsuchiura, Japan)

Elsevier Sequoia

Superlubricity and frictional anisotropy 121
M. Hirano (Tokyo, Japan) and K. Shinjo (Kyoto, Japan)

Effect of atomic-scale surface roughness on friction: a molecular dynamics study of diamond surfaces 127
J.A. Harrison, R.J. Colton, C.T. White and D.W. Brenner (Washington, DC, USA)

Exoelectron emission: possible relation to seismic geo-electromagnetic activities as a microscopic aspect in geo-tribology 135
Y. Enomoto, M. Akai (Ibaraki, Japan), H. Hashimoto (Tokyo, Japan), S. Mori and Y. Asabe (Morioka, Japan)

Thin Films

Review of the tribology of diamond-like carbon 143
A. Grill (Yorktown Heights, NY, USA)

Microtribological improvement of carbon film by silicon inclusion and fluorination 155
S. Miyake (Saitama, Japan), T. Miyamoto and R. Kaneko (Tokyo, Japan)

Recent advances in molecular level understanding of adhesion, friction and lubrication 161
H. Yoshizawa, Y.-L. Chen and J. Israelachvili (Santa Barbara, CA, USA)

Adsorption and configuration of lubricant molecules on overcoat materials 167
M. Yanagisawa (Kawasaki, Japan)

Micromachines and Molecular Machines

Estimation of gas film lubrication effects beneath sliding bushings of microrotors using a molecular gas film lubrication equation 175
S. Fukui and R. Kaneko (Tokyo, Japan)

Silicon micromachining and micromachines 181
M. Esashi (Sendai, Japan)

A biological molecular machine: bacterial flagellar motor and filament 189
K. Namba (Seika, Japan)
